TITLE

: LIGHTING TOOL

ABSTRACT: PROBLEM TO BE SOLVED: To provide a lighting tool with improved utilization efficiency of light from a linear light source with a reflecting member, using a simple structure for utilizing the linear light source.

> SOLUTION: The tool is composed of a linear light source 11, arranged so as to be extended laterally, and a reflecting member 20 arranged at the rear of the linear light source, so as to reflect light from the linear light source forward. The reflecting member is provided with a concave first reflecting face 21, arranged backwards along the longitudinal direction of the linear light source, with an elliptic face at cross section vertical to the longitudinal direction of the light source, and the lighting tool is so structured that the light source is arranged to be located near the above first focal point.
